Managed SD-WAN

Keep your networks secure and optimised for cloud applications, enabling hybrid teams to work securely and efficiently.

Interactive's Managed SD-WAN gives you greater control and management over your networks by dynamically routing and prioritising network traffic according to the specific needs of each application.

Our range of managed services, including cloud, workplace, and cyber security, help you control and streamline your network management and improve security across your organisation. Improving network visibility and control, will also help you simplify management and rationalise costs.

Our local, certified engineers assess your business and technical requirements then create the optimal solution giving you choice of connectivity options, vendors and market-leading solutions from our partners.

Managed SD-WAN provides you with:

- Flexible solution that can be purchased as a managed service with or without connectivity on 1–3-year agreements

- Simple, easy-to-manage network infrastructure that improves visibility, control and rationalisation of costs

- Centralised control so you can rapidly roll out policy changes and scale to deploy new sites

- We can leverage your existing network infrastructure, making the most of your current ICT investments

- Our experienced team follow a process to minimise risk, ensuring smooth transition

- Ongoing management, monitoring and maintenance of your solution from our local team

- A Customer portal with real-time analytics, reporting and insights

- 24/7 onshore service to support peak performance
